

BIOLOGY FLIPCARDS™

CONCEPTS ON-THE-GO

©2013 Hexco Academic

BIOLOGY FLIPCARDS

Biology FlipCards organizes a vast amount of information for the serious science competitor and presents key elements of science in a concise and compact format. *Biology FlipCards* are not a replacement for an in-depth study of biology, but rather a method of reinforcing basic biology concepts that appear on many state and national tests. We believe you will find *Biology FlipCards* to be a handy reference guide and an integral part of contest preparation in the field of science. This product is also ideal for high school study and for college biology intro courses. This product is single-hole punched for those who wish to insert the flip cards into a binder.

Good luck in your science endeavors!

TABLE OF CONTENTS

Topic	Pages
Biology Basics/Chemistry	5-17
Cells	18-23
Metabolism	24-35
Genetics	36-48
DNA	49-55
Evolution	56-62
Organizing Living Things.....	63-66
Viruses/Prions	67-69
Bacteria	70-72
Protists	73-79

TABLE OF CONTENTS - continued

Topic	Pages
Plants.....	80-95
Fungi.....	96-97
Animals.....	98-112
Human Physiology.....	113-143
Ecology	144-150

Biology Basics

Pages 5-17

Metric Measure

- Base 10 system; change prefix to change quantity
- Base units
 - Temperature: degrees Celsius
 - Length: meter
 - Mass: gram
 - Volume: liter
 - Time: second
- Kilo, hecto, deka, base, deci, centi, milli
- 1000, 100, 10, base, 0.1, 0.01, 0.001

Chemistry of Life

- Four elements make up 97% of all living matter
 - Carbon, oxygen, hydrogen, nitrogen
- Sulfur, phosphorus, potassium, calcium make up remainder
- Hierarchy of life organization
 - Atom-molecule/compound-organelle-cell-tissue-organ-system-organism
- **Atom:** smallest particle of element that still has characteristics of element
 - Protons (p^+), positive charge, in nucleus
 - Neutrons (n^0), neutral charge, in nucleus
 - Electrons (e^-), negative charge, in electron cloud

Metabolism

Pages 24-35

Metabolism

- Sum of all chemical reactions of building and breaking down
- Anabolism: building up of molecules
- Catabolism: breaking down molecules
- The two above are linked by ATP (adenosine triphosphate)
- **ATP**: adenosine triphosphate consists of nitrogen base adenine, ribose sugar and three phosphates
- Breaking of phosphate bonds releases energy; building of bonds stores chemical energy
- ATP is the universal energy molecule used by all living organisms

Prions: The Nonliving, Infectious Proteins

- Discovered by *Stanley Prusiner*
- Molecule that spreads infectious disease, not living
- Diseases Caused by Prions:
 - *Creutzfeldt-Jakob Disease*
 - *Wasting Disease*
 - *Bovine Spongiform Encephalitis*
 - *Kuru*
- All are degenerative nerve diseases

Gymnosperms

- Word means “*naked seed plant*”
- Main divisions: conifers, ginkos, cycads
- **Ginkos:** maidenhair tree only surviving species
- **Cycads:** look like palms, cone in center of plant
- **Conifers:** cone-bearing plants; pines, spruce, fir, larch, juniper, cedar, cypress, redwood; most evergreen
 - Conifers have both male and female cones: male cones smaller and produce pollen; female cones larger and are where seeds develop.

Subphylum *Vertebrata*

- **Agnathans:** jawless, lamprey, hagfish
- **Chondrichthians:** cartilage, jawed fish, sharks, skates, rays
- **Osteichthians:** bony, ray-finned fish, bass, perch, tuna
- **Amphibians:** Two lives, 1st true tetrapods, tied to water
- **Reptiles:** 1st amniotic egg, most are cold blooded
- **Aves:** birds, definite tie to reptile lineage
- **Mammals**
 - *Monotremes:* egg laying mammals: platypus
 - *Placentals:* placenta feeds fetus; humans
 - *Marsupials:* pouched, fetus develops outside of body

KENNETH DAVIS

The author, Kenneth Davis, earned his B.S. from Texas A&M University and a M.S. in microbiology from The University of Texas Health Science Center. He has taught science for 25 years, in the areas of elementary enrichment, middle school, high school, Advanced Placement, dual credit, and at the college level.

Mr. Davis has developed curriculum for both middle and high school science, and has coached numerous UIL Science teams. Many of his UIL students and teams have won District and Regional championships and have achieved success at the State level.

Currently, he serves as a Science teacher at Tivy High School at Kerrville ISD and teaches Medical Microbiology for Austin Community College.
